High Technology for quality soldering

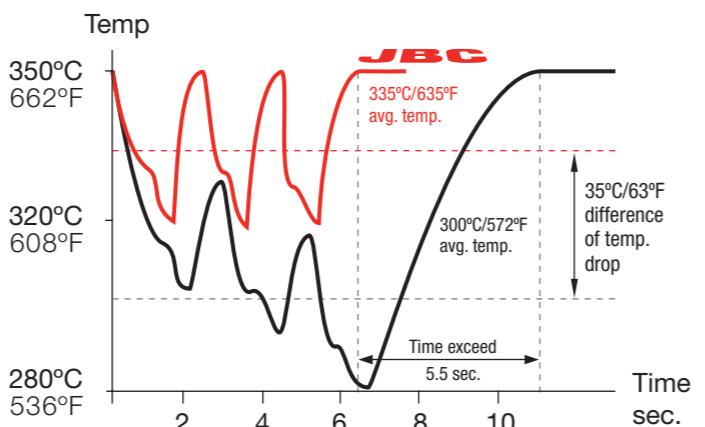

The JBC Exclusive Heating System

JBC's stations work with the JBC Exclusive Heating System which recovers tip temperature extremely quickly. This increases work efficiency and allows the user to work with lower temperatures.

Efficient Temperature Control

Comparative process of 3 solder joints

The tip temperature in JBC drops 35°C / 63°F less than other brands during 3 comparative solder joints

The Intelligent Heat Management

Thanks to automatic detection of the tool in the stand, JBC Soldering and Rework Stations allow the tools to enter into **Sleep & Hibernation** mode when not being used. As a result, tip life lasts up to 5 times longer.

Sleep Mode

Sleep mode automatically lowers tip temperature below solder melting point when the tool rests in the stand.

It prevents the dissolution of the tip's iron coating into molten solder.

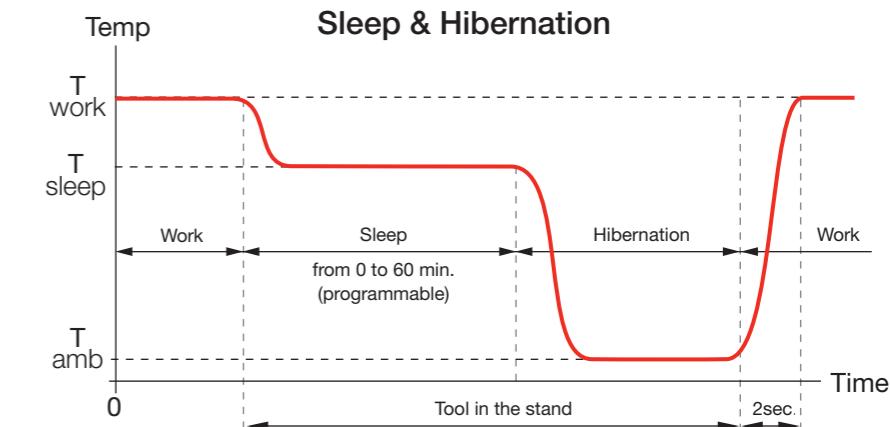

Hibernation Mode

After a configurable period of tool inactivity in the stand (10 min factory default), the tool enters into **Hibernation** mode.

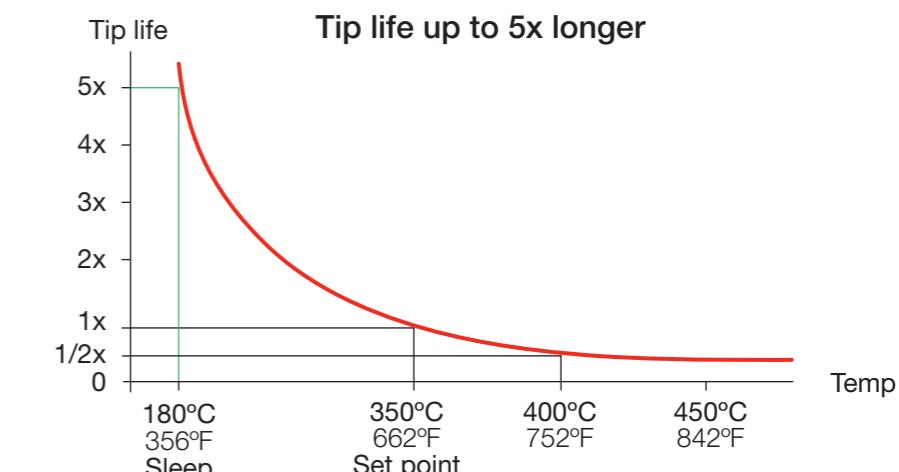

It cuts off power supply making the tip reach room temperature thus preventing oxidation and saving energy.

Longer Tip life

Tip life increases exponentially by using lower temperatures as shown. Using the **Sleep** mode, the temperature is further reduced, which extends tip life by 5.

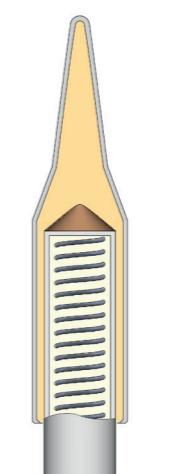

Tip life up to 5x longer

Cartridges with extended tip life

The essential part of the soldering iron is the tip so JBC has over 400 models of cartridges of different sizes and shapes to choose from, depending on each application.

JBC has developed the most advanced technology based on the following principles:

► Excellent Heat Transfer
The compact element reduces thermal barriers.

► Instantaneous Heating-Up
A fully-integrated thermal sensor in the heater ensures quick temperature recovery.

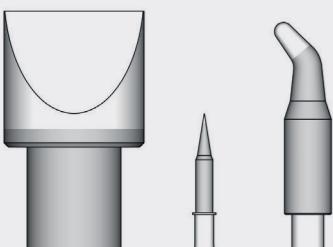

► Great Durability
The intelligent algorithm control program extends tip life.

When you start working do not forget:

Bigger is better

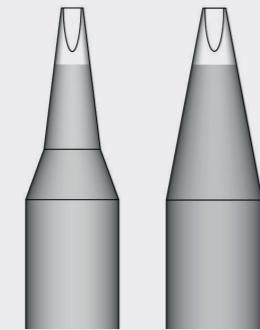

As you know, **the bigger the solder tip, the better the thermal transfer.**
So remember to select **the biggest tip possible** for your application.

Over 400 tips of different sizes, shapes and power

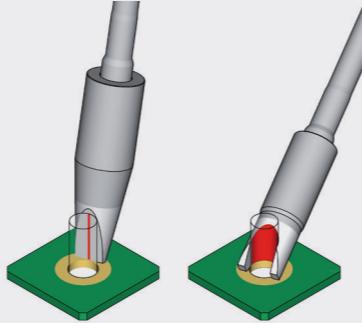

JBC cartridges range from models for precision work to high power requirement applications.

Geometry
Slimness vs Efficiency

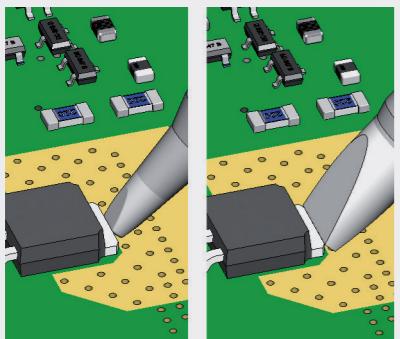

A high thermal-efficient tip makes your job up to **40% faster** than a tip with a slimmer geometry.

Increase the contact surface Tip - Application

The bigger the contact surface the tip has with the application, the higher the **thermal transfer**.

Largest mass possible

The more mass the tip has, the more heat is accumulated and the **lower is the temperature drop**.

Maintain tip surface clean and tinned

Remember that rusty and dirty surfaces reduce **heat transfer** to the solder joint.

(See JBC's cleaning methods on pages 8-9).

Factors limiting life of tips

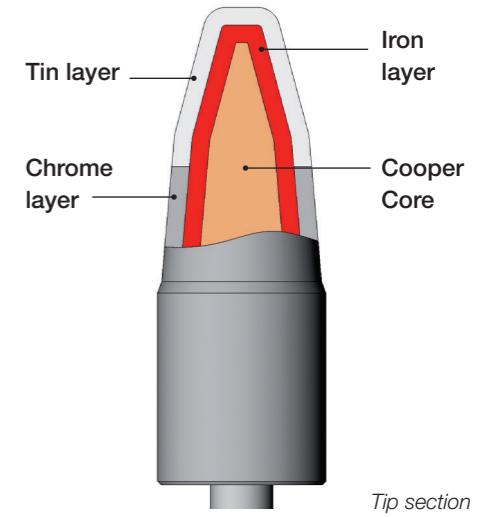

► **Working temperature**
The higher the temperature, the higher the oxidation and the corrosion. Work at the lowest possible temperature. Use thermal-efficient tools and keep tips clean of oxidation.

► **Flux and solder alloy**
Too much active Flux can cause corrosion. IPC recommends: ROL, REL and ORL. The internal flux from small Ø solder reels might not be enough. Provide external Flux if necessary.

► **Correct soldering techniques**
Too much pressure on the surface to solder can cause tip or plate breakage. Do not use as a pointed object or a screwdriver. Choose the biggest possible tip for each application to work at the lowest possible temperature.

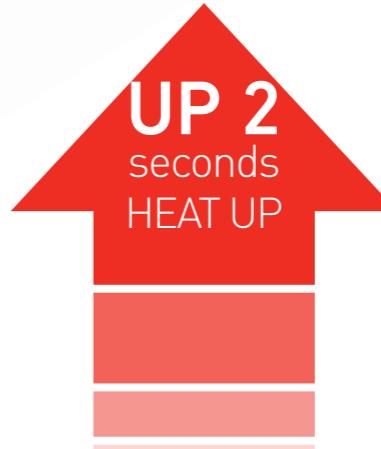

► **Iron plating thickness**
The wearing down of the plate shortens its life (hollowed-out). Do not use mechanical or chemical means to clean the tip. Use the cleaning methods provided by the manufacturer. Do not apply too much pressure.

► **Oxidation**
Iron oxide does not wet nor transfer temperature well (dewetting). The higher the temperature, the greater the risk of oxidation. Always keep tips tinned while not in use. Use flux on your solder joints. Take advantage of SLEEP & HIBERNATION functions.

Remember

- Always work at the **LOWEST POSSIBLE TEMPERATURE**.
- Use **THERMAL-EFFICIENT TOOLS**.
- Choose the **BIGGEST** tip possible.
- IPC recommends **FLUX ROL, REL and ORL**.
- Protect the tip with a **TIN COATING** when not in use.
- Use the **SLEEP & HIBERNATION** functions.
- **DO NOT** apply too much **pressure** to the tip.
- Use the **CLEANING METHODS** recommended by the manufacturer.
- Only use re-tinners when absolutely necessary.

Cleaning systems

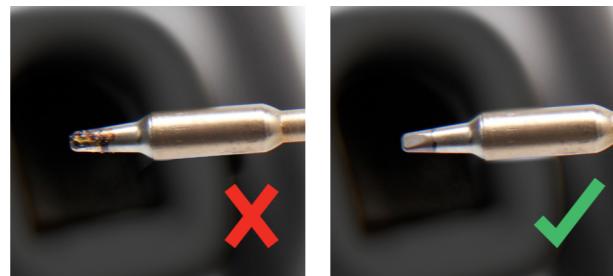

Clean the tip in a fraction of a second

With automatic cleaners you save time and optimize production.

For a good heat transfer, keep the tip tinned thus free from oxides.

Improve heat transfer

A clean tip is always easier to tin, resulting in higher quality solder joints.

JBC offers effective, practical and affordable methods to prevent splashing and extend a tip's life:

Easy to maintain

The solder collector tray can be easily emptied and re-used with no wear and tear.

Metal / Non-metal brushes

The locking mechanism on the brushes makes them fast and easy to replace.

ESD Tip Cleaner

Brass wool

Ref. [CL6210](#)

Very effective cleaning method. Leaves a small layer of solder on the tip preventing oxidation between cleaning.

Sponge

Ref. [CL0354](#)

This is the softest method. Be sure to have the sponge always clean and wet, not soaked, with de-ionated water.

Automatic Junior Tip Cleaner

Ref. [CLMS](#)

Tip wiper

Ref. [CL0240](#)

This is the method to eliminate the excess of solder on the tip.

Save space

You can easily fit the tip cleaner into your work area thanks to its reduced size.

Two modes of operation

The motorized brushes start by pressing the button or by selecting the continuous mode.
