Wio RP2040 Module - Build-in RP2040 + ESP8285 WIFI chip - Wireless 2.4G & IoT Platform

Wio RP2040 Module: RP2040 + ESP8285 Wi-Fi in a compact SMT form factor for IoT and wireless projects.

Overview

The Wio RP2040 Module integrates a dual-core Raspberry Pi RP2040 processor with an ESP8285 Wi-Fi chip, delivering 2.4GHz wireless connectivity in a compact 18.0x28.2mm SMT package. It supports C/C++ and MicroPython development and is ideal for IoT projects, wireless control applications, and smart toys.

Key Features

Key Feature

- **Highly integrated Wi-Fi SoC:** powerful ESP8285 wifi chip, support 802.11 b/g/n, 2.4~2.4835GHz up to 72.2 Mbps, and Ap&Station mode
- **Powerful CPU with high performance:** dual-core 133MHZ Raspberry PI RP2040 processor with 264KB SRAM, 2MB Flash, clock running up to 133 MHz
- **Flexible Compatibility and User-Friendly:** Comprehensive C/C++/MicroPython SDK, software examples and documentation support, C++/Micropython support, Thonny editor compatible
- **Extremely compact size:** 18.0x 28.2x 1.0mm 32 pins SMT
- **Multiple certifications obtained:** FCC and CE certification

Description

Wio RP2040 module is designed with the RP2040 + ESP8285 wifi chip. The onboard wifi chip provides stable wireless capabilities, making it a perfect fit for your IoT platform choice. This rp2040 wifi module supports the Thonny code editor used by Raspberry Pi Pico. You can upgrade your original Pico project to Pico IoT project with a few simple lines of code! And the module adopts the stamp hole package form and small size, you can solder the module on various PCB boards more conveniently.

In addition to the RP2040 + ESP8285 wifi chip combination, the board has rich interfaces, including 32 GPIO PINs (20 PINs support PIO and PWM), 2 UART, 4 ADC, 2 SPI, and 2 I2C. Some pins can be multiplexed, such as GP12 and GP13 with I2C, SPI, and UART functions. This is why 28 GPIO PINs can achieve more I/O PINs and interfaces. The Wio RP2040 module also has a USB PIN, which can be designed and connected to the USB interface.

The Wio RP2040 module is fully compatible with the Thonny code editor, which means that you do not need professional electronic engineering-related knowledge, and you can control hardware devices just by using a simple MicroPython language!

Specification

Related Product Selection Chart

Come take a look at Seeed's RP2040-related products. For the XIAO RP2040 based on the Raspberry Pi RP2040 chip, it is very suitable for small wearable projects. In addition, XIAO BLE is a powerful Bluetooth-enabled microcontroller. Let's see how they compare in terms of performance, interfaces, wireless connectivity, and more.

Application

- Various Pico projects with wireless functions
- Wireless control application
- Smart Toys - wireless voice-activated toy car
- Various IoT projects - such as smart home, smart air quality monitoring, etc.

Pinout

Note

The GPIO pins are programmable so you can reconfigure the pins! Check out the [RP2040 datasheet](#) for more information on the GPIO functionality.

PCBA Prototype Sponsorship for Commercial Wio RP2040 Module Designs

Special Note: Seeed is offering 5 free Wio RP2040 modules to designers who use the module with the Seeed Fusion IDE.

There is great [C/C++ support](#), an official [MicroPython port](#), and a [Seeedstudio Wio RP2040 Module MicroPython UF2 file](#)! We of course recommend our custom Wio RP2040 Module MicroPython UF2 because we think it's the easiest way to get started and it has support with wireless drivers, network, usocket, MQTT, supported out of the box so you can follow along with our projects and tutorials.

Specification

Item	Details
Processors	Dual Cortex M0+ processors, up to 133 MHz
SRAM	264KB
Flash	2MB
Wireless connectivity	2.4~2.4835 GHz ; IEEE802.11 b/g/n ; AP & Station mode
GPIO, PIO and PWM Pins	20
I2C	2
SPI	2
UART	2
ADC	4
VIN	5V-3.6V DC
Size	18.0 x 28.2 x 1.0mm
Antenna	Onboard PCB antenna
Programming Languages	C/C++, MicroPython

FCC Requirement

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) this device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

15.21

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses, and can radiate radio frequency energy.

If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
