PRICE

\$6.90(Excl. VAT)

Overview

The YF-B5 water flow sensor features a copper body, water rotor, and hall-effect sensor to output pulse signals corresponding to flow rate. It is suitable for flow detection in water dispensers or coffee machines, offering long life and easy installation.

Key Features

Water flow sensor consists of a copper body, a water rotor, and a hall-effect sensor. When water flows through the rotor, rotor rolls. Its speed changes with different rate of flow. The hall-effect sensor outputs the corresponding pulse signal. This one is suitable to detect flow in water dispenser or coffee machine.

Life is longer than plastic body.

Features

- Compact, Easy to Install
- High Sealing Performance
- High Quality Hall Effect Sensor
- RoHS Compliant

Part List

1 x YF-B5 water flow sensor
