

Part Number SW500230 - Equalis Pro Plus

Equalis Pro Plus is the most efficient and cost-effective way to take mathematical models and perform numerical analysis, simulation, and graphical visualization. By using the graphical designer, users can create control algorithms with the block-diagram notation familiar to control engineers. As each block denotes a mathematical operation, users can string blocks together, thereby creating control algorithms of various complexities. Pro Plus also allows users to acquire data from external measurement devices and analyze it using various statistical and signal-processing procedures.

For a fraction of the price of equivalent software applications, this software solution provides you not only with the platform, but also with a suite of integrated modules including Communications, Signal Processing, Control and Power Systems, Fixed Point, and much more.

Equalis is a trusted 3rd Party Tool provider
