

**MAXIM***Precision, CMOS Analog Switches***MAX317/MAX318/MAX319****General Description**

The MAX317/MAX318/MAX319 are precision, CMOS, monolithic analog switches. The single-pole single-throw (SPST) MAX317 is normally closed (NC), the SPST MAX318 is normally open (NO), and the single-pole double-throw (SPDT) MAX319 has one normally open and one normally closed switch. All three parts offer low on resistance (less than  $35\Omega$ ), guaranteed to match within  $2\Omega$  between channels and to remain flat over the analog signal range ( $\Delta 3\Omega$  max). They also offer low leakage (less than  $250\text{pA}$  at  $+25^\circ\text{C}$  and less than  $6\text{nA}$  at  $+85^\circ\text{C}$ ) and fast switching (turn-on time less than 175ns and turn-off time less than 145ns).

The MAX317/MAX318/MAX319 are fabricated with Maxim's new improved silicon-gate process. Design improvements guarantee extremely low charge injection (10pC), low power consumption ( $35\mu\text{W}$ ), and electrostatic discharge (ESD) greater than  $\pm 2000\text{V}$ . The 44V maximum breakdown voltage allows rail-to-rail analog signal handling capability.

**Applications**

Sample-and-Hold Circuits  
Guidance and Control Systems  
Heads-Up Displays  
Test Equipment  
Military Radios  
Communications Systems  
Battery-Powered Systems  
PBX, PABX

**Features**

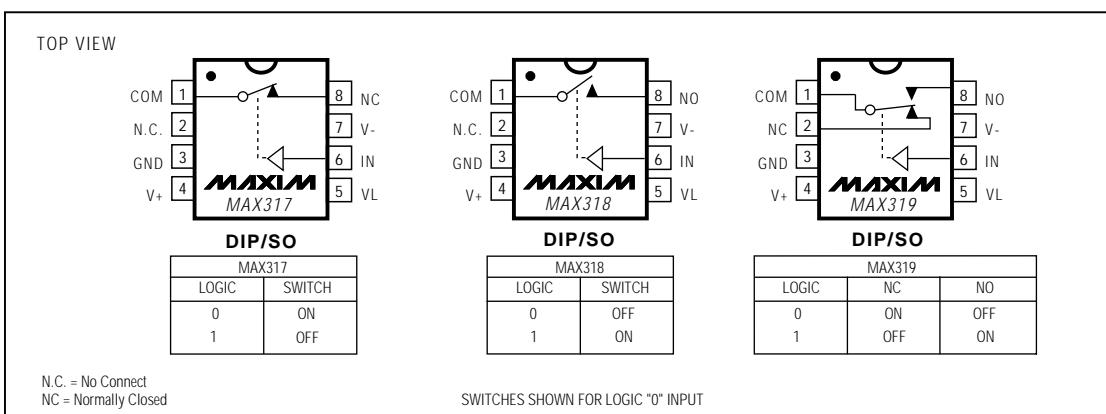

- ♦ Low On Resistance  $<20\Omega$  Typical ( $35\Omega$  Max)
- ♦ Guaranteed Matched On Resistance Between Channels  $<2\Omega$
- ♦ Guaranteed Flat On Resistance over Analog Signal Range  $\Delta 3\Omega$  Max
- ♦ Guaranteed Charge Injection  $<10\text{pC}$
- ♦ Guaranteed Off-Channel Leakage  $<6\text{nA}$  at  $+85^\circ\text{C}$
- ♦ ESD Guaranteed  $> 2000\text{V}$  per Method 3015.7
- ♦ Single-Supply Operation (+10V to +30V)  
Bipolar-Supply Operation ( $\pm 4.5\text{V}$  to  $\pm 20\text{V}$ )
- ♦ TTL-/CMOS-Logic Compatible
- ♦ Rail-to-Rail Analog Signal Handling Capability

# Precision, CMOS Analog Switches

## ABSOLUTE MAXIMUM RATINGS

Voltage Referenced to V-

V <sub>+</sub> .....	+44V
GND .....	+25V
V <sub>L</sub> .....	(GND - 0.3V) to (V <sub>+</sub> + 0.3V)
IN, COM, NC, NO .....	(V <sub>+</sub> - 2V) to (V <sub>+</sub> + 2V) or 30mA, whichever occurs first
Continuous Current (any terminal) .....	30mA
Peak Current, NC, NO, COM (pulsed at 1ms, 10% duty cycle max) .....	100mA
ESD .....	±2000V

Continuous Power Dissipation ( $T_A = +70^\circ\text{C}$ ) (Note 1)

Plastic DIP (derate 9.09mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$ ) .....	727mW
SO (derate 5.88mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$ ) .....	471mW
CERDIP (derate 8.00mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$ ) .....	640mW

Operating Temperature Ranges:

MAX31_C_ .....	0°C to $+70^\circ\text{C}$
MAX31_E_ .....	-40°C to $+85^\circ\text{C}$
MAX31_MJA .....	-55°C to $+125^\circ\text{C}$
Storage Temperature Range .....	-55°C to $+150^\circ\text{C}$
Lead Temperature (soldering, 10sec) .....	+300°C

**Note 1:** All leads are soldered or welded to PC board.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS — Dual Supplies

### Pin Description

PIN			NAME	FUNCTION
MAX317	MAX318	MAX319		
1	1	1	COM	Analog-switch common terminal
2	2	—	N.C.	No connect — not internally connected
—	—	8	NO	Analog-switch normally open terminal
3	3	3	GND	Logic ground
4	4	4	V+	Analog-signal positive supply input
5	5	5	VL	Logic-level positive supply input
6	6	6	IN	Logic-level input
7	7	7	V-	Analog-signal negative supply input
8	—	2	NC	Analog-switch normally closed terminal
—	8	—	NO	Analog-switch normally open terminal

### Applications Information

#### Operation with Supply Voltages Other Than $\pm 15V$

The main limitation of supply voltages other than  $\pm 15V$  is analog signal range reduction. The MAX317/MAX318/MAX319 switches operate with bipolar supplies of  $\pm 5V$  to  $\pm 20V$ . Typical Operating Characteristics graphs show typical on resistance for  $\pm 15V$ ,  $\pm 10V$ , and  $\pm 5V$  supplies. Switching times increase by a factor of two or more for operation at  $\pm 5V$ . The MAX317/MAX318/MAX319 can operate from unipolar supplies of  $+10V$  to  $+30V$ . Both parts can also operate from unbalanced supplies such as  $+24V$  and  $-5V$ .

Connect V- to 0V when operating with a single supply. This means that VL must be connected to  $+5V$  to be TTL compatible, or to V+ for CMOS logic input levels.

**Overvoltage Protection**  
Proper power-supply sequencing is recommended for all CMOS devices. It is important not to exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the devices. Always sequence V+ on first, followed by VL, V-, and logic inputs. If power-supply sequencing is not possible, protect the devices from overvoltage by

adding two small signal diodes in series with the supply pins (Figure 1). Adding the diodes reduces the analog signal range to 1V below V+ and 1V below V-, but low switch resistance and low leakage characteristics are unaffected. Device operation is unchanged, and the difference between V+ to V- should not exceed  $+44V$ .
